Acne Treatment and Scar Treatment Before and After Photos.

Before

After

Minimal Scarring

For incredible results to **improve your skin's texture, minimize pore size, wrinkle reduction and scar treatment**, the micro-needling pen is the ideal solution. As a minimally invasive procedure, our micro-needling pen treatments involve the use of a pen-like device that puncture the skin's surface with fine needles. This type of **controlled skin injury will result in the increased and immediate production of elastin and new collagen**. Multiple treatments may be necessary, depending on the severity of your scarring.

Moderate to Severe Scarring

The highly-effective **treatment used to treat moderate to severe acne scars utilizes deep dermal heating** for revolutionary results. **La Belle Vie** is proud to introduce the new **Profound by Syneron** to **trigger the production of new collagen**. The **Profound** treatment combines micro-diameter needles to deliver focused RF energy deep into your dermis, safely and

effectively. The **Profound** treatment **provides incredible collagen remodeling results with 3 to 5 days of downtime**. This image is the result for the same client after 3 micro-needling treatments:

What to Expect Post Treatment

Patients experience **minimal downtime post treatment with micro-needling and can see mild redness which can last up to one day** post treatment. Depending on the severity of your acne scarring, 3-5 individual treatments may be needed, 4-6 weeks apart.

Treatment for Severe Acne Scarring

For the most severe scarring caused by acne, **La Belle Vie** employs the more aggressive treatment approach using **a laser to dramatically improve your skin's tone and texture through skin resurfacing following the Profound**. We provide targeted treatment with our innovative CO2 laser to penetrate your skin with thermal microchannels, to create an ablative and thermal effect without damaging surrounding tissue. The micro-injury sites work to

enhance results and jumpstart your healing process with collagen stimulation and neocollagenesis to strengthen and tone your skin's texture. You can expect a downtime of 4-7 days after the procedure.
